PIREVO - FULL CONTEXT TRANSFER & AKASHIC CANONICAL HANDOFF

Version: 2026-10-22, Asia/Manila

Project: PIREVO / AstraLabs PH

Status: Production website; direct Pinterest operations paused for handoff only

Owner instruction: Keep the approved PIN STYLE, all growth goals and PIREVO expansion plans. No scheduled automation.

1. Read this before doing anything

This document is a complete operational transfer for the NEXT ChatGPT/Astra chat, not a promise that unattended work will occur after this chat closes. Read this entire handoff plus the files explicitly listed below before publishing anything. Continue only from true verified records. Preserve existing production content, Amazon accounts, browser profile, Pinterest posts, source images, Akashic version history, signed assets and analytics. Never silently reset status, overwrite owner-approved designs, create unverified products, or claim work happened because it was planned.

2. Ownership, goal and working preferences

PIREVO is AstraLabs PH's independent online product discovery and Amazon affiliate editorial storefront. The owner wants a scalable, visually polished, search-friendly, AI-assisted business that can acquire qualified customers through Google, Pinterest and useful shopping content. First-party SCS Creations KDP books and AstraLabs mobile apps appear alongside, but Amazon checkout occurs only at Amazon, not on PIREVO.

- Business outcome: qualified traffic, genuine retailer outbound clicks, real attributable affiliate commissions and continuously improving original content, not empty traffic or high Pin quotas.
- No fixed scheduled automations, cron, posting queues or hourly tasks for the current Pinterest run. Use live direct Astra Browser + Composio connected Pinterest and record genuine provider results.
- Work end-to-end in the active session when tools allow, without repeatedly asking for routine confirmations. Respect the already-established requirement for APPROVAL OF EACH EXPORTED PIN IMAGE prior to publication.
- Zero-cost first. No unnecessary subscriptions or paid APIs. Do not imitate vendor media or introduce copyright risks to save effort.
- Browser: Astra managed macOS MCP profile stays HEADLESS/HIDDEN for normal work. Temporarily show only for human authentication, return hidden afterward. Do not commandeer/close owner's normal Chrome tabs. Preserve auth profile.
- Preserve progress across interruptions via canonical files, GitHub commits and Akashic records. Do not promise autonomous work while this chat is closed.

3. Repositories, operators and source-of-truth

Canonical local Git checkout on owner's connected Mac:

/Users/wafu/Desktop/AstraLabsTemp/pirevo-seo-20261021

GitHub repo: https://github.com/sjgrind168/astralabsph-site

Public PIREVO home: https://www.astralabsph.com/pirevo/

Production pipeline: GitHub main -> Vercel astralabsph-site, target production; check deployment READY and actual public endpoints.

Mac tool operator: mcp__Astra_Terminal_Local; interactive sites: mcp__Astra_Browser; connected Pinterest account via Composio (pinterest_aves-snork). Google Search Console through connected tool. Supabase Akashic project ID cscqulbludoyzsgniits.

Useful Akashic current project records BEFORE this handoff:

- pirevo-global-marketplace-storefront-seo-release-20261021 (version 9)
- pirevo-pinterest-direct-execution-20261022 (version 4)
- pirevo-pinterest-creative-hard-lock-v3 (version 2)
- pirevo-amazon-onelink-support-chat-20261021 (version 4)
- pirevo-amazon-onelink-country-expansion-audit-20261021 (version 6)

Akashic writer: /Users/wafu/.local/bin/astralabs-akashic publish, JSON envelope action record.publish; never output API keys or stored credentials.

Latest Git commit at handoff inspection: d0b8da4662f313b7655f261530b52a0b819a93e1, "assets(pirevo): three fullbleed batch2 pin drafts with mobile QA and source provenance". Production site last verified in earlier run at release a6efaf6 (audit aedd1b0); the handoff document commits do not themselves prove a later production deployment.

Run source checks and inspect current Git status before any changes. The local worktree was clean at inspection, and approximately 5.8 GiB was free on the Mac data volume. Earlier disk-full incidents were temporary; check before large builds.

4. PIREVO website - what is ALREADY live

Current canonical source store-data.js: 142 published editorial product records across 20 categories. No evidence exists that all 142 are live bestsellers.

Website design v5 based on owner's Social Shopping reference screenshot:

- Sticky clean white PIREVO header, deep forest-green editorial hero, calm cream/off-white surface, clean legible type, high-quality product cards.
- Hero; 20 visual Category tiles; IMMEDIATELY below Categories a compact four-card shelf combining 2 KDP books and 2 AstraLabs apps; then Trending-inspired product carousel; then searchable all-products finder; holiday and everyday carousels; original buying guides and further discovery sections.
- Owner's final layout directive: KDP Books and Mobile Apps must NOT be buried at the bottom; they are compact immediately below Categories and above Trending. Four narrow desktop cards / 2x2 compact mobile grid with small assets.
- 3 swipeable, manual, non-autoplay carousel product collections: editorial trending-inspired, holiday/gifts and everyday upgrades. Trending is thematic, NOT verified live sales.
- Search/filter grid of 142 items with first 24 shown, progressive "more"; 20 individual category pages searchable and revealing 12 real products at a time. No fake products to pad counts.
- 46 existing researched Social Shopping items at /pirevo/trends/; comparison Buying Desk at /pirevo/compare/ supports 3 items and shareable URL; 11 buying guides; international guide at /pirevo/international/.
- Product PDPs and affiliate disclosures stay intact; no invented prices, reviews, stock or schema Product ratings.

- Two original KDP titles: Timmy and the Time-Traveling Watch (Kindle B0FX95D9LL; paperback B0FXDNX4DV) and Pip & Poppy's Big Christmas Adventure (paperback B0HMQVHPN7). Timmy's homepage artwork is an editorial placeholder, not an unauthorized copied cover.
- Mobile Apps: Astramate and Keepry with existing app artwork and original landing URLs. Do not remove these four cards during rebuild.
- Previous complete live sweep passed 180/180 public URLs, with 142 tagged active US Amazon product links and missing disclosures 0 at that checkpoint. This is dated evidence; recrawl as needed before new release.
- repeatable QA/build command: npm run pirevo:refresh. Preserve dynamic item counts and all SEO/canonical links; perform source, device browser, live route and Vercel checks.

5. Product expansion goal and research rules

Owner's proposed target is "50 BEST products in EVERY category." Interpret "best" as independently useful, category-appropriate, evidenced editorial picks, NOT fabricated Amazon bestseller ranking.

- 20 categories x 50 researched product placements = 1,000 placements.
- At Oct 22 snapshot: 142 published placements, 858 gaps. These are NOT 858 approved product listings or pending live Pinterest posts.
- Actual product counts by category:

Cleaning 1; Outdoor & Garden 1; Coffee Bar 2; Home Office 2;
Bags 3; Tools & DIY 3; Fall Home 4; Sleep & Bedroom 4;
Fitness 5; Car 7; Tech 7; Travel 7; Gaming 8; Kids 8;
Pets 8; Gifts 8; Kitchen 11; Beauty 12; Home Organization 12; Seasonal 29.

- Expansion priorities: strengthen current high-demand existing product pages and buying guides first; then research exact SKU gaps in Cleaning, Coffee Bar, Home Office, Outdoor/Garden, and Sleep. Avoid filling every category with thin affiliate pages.
- Four newly researched and published Oct 22, Amazon US exact model/ASIN checked:

Bedsure Queen Satin Pillowcases (B0725WFLMB);
Bedsure Twin/Twin XL Prewashed Comforter (B0D145689D);

Bedsure Cotton Oversized King Duvet Cover (B0CSYXYWDZ);

BLACK+DECKER LDX120C drill (B005NNF0YU).

Their new pages use original first-party typographic SVGs; do not describe them as confirmed ranked bestsellers or hands-on tested.

- Research signals from dated Sept/Oct 2026: Clean Skin Club Towels XL, medicube Zero Pore Pads, Hero Mighty Patch already in catalog and supported by third-party reported category demand; Owala, Earth Rated and other current catalog products have related market evidence, but exact SKU/size variant ranking still needs checks.
- Missing promising research candidates include BISSELL Little Green Mini 4075, ZELUS weighted vest, Zulay frother, Dr. Elsey's cat litter, Sharpie markers, laminating sheets, selected outdoor solar lights, kitchen air fryers. Some have search-demand signals, not proven exact SKU sales; ASIN, color/size, availability, margin and source must be verified before publishing.
- Publication gate for EACH new PDP: exact Amazon US model/ASIN and variant; dated demand signal or valid buyer use case; independent accurate use/fit/comparison notes; permitted imagery; compliant affiliate link + disclosure; canonical URL and sitemap; mobile/desktop site QA; update master ledger and Akashic. Never publish 50 placeholders.
- Market keyword and customer demand evidence should be evaluated with real Search Console impressions, clicks, Pinterest outbound behavior, actual Amazon Associate earnings (where available), commission category and country, rather than assuming trends equal commissions.

Canonical research/plan:

marketing/pirevo/CATEGORY_50_BACKLOG_20261022.json

marketing/pirevo/PRODUCT_EXPANSION_BATCH_20261022.json

marketing/pirevo/PIREVO_MARKETPLACE_READINESS_20261021.json

docs/PIREVO_STOREFRONT_SEO_AUDIT_20261021.md

6. Amazon Associates, global storefront and SEO

- Primary US Amazon Associates tracking ID: pirevo-20. All tagged product buy links remain retailer checkout links. Do not alter tax/payout/legal enrollment/payment forms.
- Verified account Global Earning Preferences: United States, Canada, UK, Germany, France, Italy, Spain, Netherlands, Poland and Sweden (10 checked). Human Associates support specifically said separate enrollment for NL/PL/SE not needed under this globally enabled account. Japan requires separate enrollment; Australia not resolved.
- The legacy OneLink /onelink tool was HTTP 403 even when signed in; provider support treated this as expected for globally enabled ID. Global Earnings report is https://affiliate-program.amazon.com/p/reporting/global.
- Ten enabled market preferences DO NOT prove every PIREVO SKU is present/in stock in every local Amazon marketplace. Exact country matching, shipment, redirect and commission attribution remain largely unverified. Never claim worldwide inventory or earnings without actual evidence.
- International guide and links already exist; local country selector is not forced and does not rewrite US tags without independently verified destination. Preserve existing data and settings.
- Original sitemap.xml and pirevo/sitemap.xml were accepted by Google Search Console after release. Submission is not proof of indexing, traffic or rankings. Prior source audit observed no recent PIREVO Search Console impressions in the sampled period; refresh 7/14/30 day metrics with dates.
- Amazon Affiliate site is NOT a direct product merchant or Amazon-owned store. Do not submit fabricated merchant inventory into Merchant Center.

- PIREVO first-party tracking uses existing PIREVO analytics / Supabase events; Buying Desk emits compare_view only after actual shopper action, respecting privacy preferences; avoid synthetic conversion events.
- IMPORTANT image licensing blocker: earlier source audit found 543 distinct Amazon CDN image URLs among historical source references; authorized provenance not established. Hash baselining is NOT permission. Do not add new Amazon seller photography to pages or Pinterest until lawful source established. Historical content needs incremental licensing remediation, not mass deletion without replacements.

7. PINTEREST CREATIVE SOP v3.0: NON-NEGOTIABLE HARD LOCK

SOURCE: marketing/pirevo/PIREVO_Pinterest_Creative_SOP_v3_HARD_LOCK_2026-10-14.md

Akashic: pirevo-pinterest-creative-hard-lock-v3, version 2.

Approved visual reference: PIREVO_Drawer_Reset_Pin_2026-10-14.png (1024x1536), owner-approved October 14. MUST inspect the actual reference asset before rendering / approving every new creative when accessible. This text never replaces the image reference.

Goal: eye-catching, premium, ultra-realistic, FULL-SCREEN vertical Pinterest creatives with distinct real-world product use cases and legible headlines. No cheap catalog/ad template.

Required:

1. 2:3 portrait minimum ideal 1000x1500, 1024x1536 acceptable. Hero photo/environment fills >=90% of the portrait. No letterboxing or framed mini-card.

2. Believable high-end editorial realism: intentional art direction, authentic lighting, rich depth, tactile materials, plausible use case. Different products require different scenes, props and compositions, NOT recolors.

3. Dominant identifiable consumer problem or product use-case. If exact SKU shown, branded geometry/packaging/variants MUST be faithful and authorized. If scene is illustrative, explicitly label "Illustrative lifestyle scene; check linked product."

4. Short truthful hook, ideally 3-9 words, readable at actual ~200px Pinterest mobile feed thumbnail. Strong contrast and generous safe margins. Optional short subheadline. PIREVO signature discreet.

5. Typography overlays the photograph via natural light/shadow or gentle gradient. NO giant 40-55% flat text panel, stacked cards, black/white floating product cutouts or massive button.

6. Media must be owned, generated with proper disclosure or appropriately licensed. Record source photographer/origin, license URL, hash, alterations, any AI use. Pexels licensed editorial photographs used in Batch 1 and 2; not product likeness claims.

7. Every Pin links to matching PIREVO first-party product page or approved guide, NEVER directly to Amazon. Correct product slug, ASIN, old affiliate tag pirevo-20 on PIREVO PDP, relevant board, English US/CA keywords, unique utm_content.

8. No invented best-seller status, pricing, star counts, reviews, discounts, actual stock, sales or medical promises. Disclosure must be useful without turning the Pin into a legal text wall. Meet Pinterest AI labeling rules.

9. Inspect exported image twice: full-res image and real ~200px feed preview. Automatic heuristics alone are NOT approval. Reject spelling mistakes, skinny/unreadable text, dead space, fake SKU photo, duplicate composition or mismatch between title and image.

10. Explicit owner/human APPROVAL IS PER EXACT EXPORTED ASSET, NOT blanket approval for future batches. Freeze SHA256 and update owner-review record before upload. Then run validate_pinterest_v3.py --require-ready. Provider confirmation creates PUBLISHED status, not the file being created.

Absolute bans:

- centered retail product inside white/cream card, rounded border, framed carousel screenshot, stock listing visual;

- half-frame empty text/color panels, legacy wave1/wave2/halloween/christmas cookie-cutter templates, repetitive orange blobs, floating black-box retail shot;

- directly posting from draft, queueing unverified files, black/fallback images, copied unlicensed vendor assets, misleading promotional claims;

- duplicate Pins or repeated templates that can be seen as spam, direct-to-Amazon outbound Pinterest links, missing affiliate disclosure.

Approved/safety ledger:

- marketing/pirevo/approved_pins_v3.json
- marketing/pirevo/validate_pinterest_v3.py
- marketing/pirevo/tests/test_pinterest_v3.py
- marketing/pirevo/PIREVO_PIN_ASSET_QA_20261022.json

For older designs classify KEEP_PREMIUM, REMAKE_OLD_CARD, DRAFT_ISSUE, UNKNOWN, RETIRED_SEASONAL. Earlier 76 wave source images are NOT 76 confirmed live Pins. Preserve old live Pin URLs; do not mass-delete. Regenerate unique better content only if justified.

8. Pinterest account, factual status, board inventory

Account: @astralabsph PIREVO business profile. Connected Pinterest via Composio uses account "pinterest_aves-snork" and LIVE tools PINTEREST_GET_PROFILE, LIST_BOARDS, LIST_PINS, CREATE_PIN, GET_PIN.

At last provider readback after Batch 1: 65 total Pins across 5 boards; previous count 62. Main PIREVO Finds board 61, Skincare & Beauty Finds 1, Kitchen Gadgets & Smart Home 1, AstraLabs Apps board 2, Work Bags & Everyday Style board 0. These are dated snapshots.

Before first batch: 60 live main-board Pins, of which 30 instances matched 29 unique published PIREVO product slugs. Other old Pins may be category guides or other URLs; do not assume they are unmatched spam. New 3 Pins include a Bedsure Pin for a previously unpinned product, plus existing/duplicate considerations for others. Recompute unique pin coverage by rereading latest live Pinterest rather than assuming three newly posted Pins mean three previously uncovered products.

- Main board: 1143844074049522281.
- Beauty board: 1143844074049638237.
- Kitchen & Smart Home: 1143844074049638244.
- Bags: 1143844074049638231.
- Apps: use provider list; never invent the ID.

Existing live Pin reconciliation:

- marketing/pirevo/PIREVO_LIVE_PIN_RECONCILIATION_20261022.json (pre-Batch1 snapshot).
- marketing/pirevo/PIREVO_PRODUCT_PIN_MASTER_20261022.csv, 142 rows, source/ASIN/category/priority/editorial notes/copy/board destination/asset rights/QA/old pin links/new pin id/status.
- marketing/pirevo/PIREVO_CATEGORY_ROUNDUP_PLAN_20261022.csv, 20 CONCEPT ONLY category rounds.
- marketing/pirevo/build_product_pin_master.py, idempotently preserves true PUBLISHED progress when rerun. Verify it does not overwrite rights/reviews/pin link.

All 142 individual product Pin metadata packages are prepared, NOT 142 finished creatives. Only provider-returned permanent Pinterest URL and exact-match readback makes a new post "PUBLISHED".

9. Pinterest Batch 1: COMPLETED, permanently verified

Owner approved the exact 3 images October 22. Images: original Pexels-licensed photographic backgrounds, custom PIREVO typography, 1000x1500 JPG, full-resolution + ~200px screenshot review. Original image SHA frozen in approved ledger and v3 validator passed. Published directly via Composio (NO schedules), then independently read back via PINTEREST_GET_PIN:

1) Bedsure Satin Pillowcases Queen Set of 2 - ASIN B0725WFLMB; board PIREVO Finds; provider Pin ID 1143844005391431160, URL https://www.pinterest.com/pin/1143844005391431160/

2) Clean Skin Club Clean Towels XL 50 - ASIN B07PBXXNCY; board Beauty; ID 1143844005391431204, URL https://www.pinterest.com/pin/1143844005391431204/

3) AeroPress Original - ASIN B0047BIWSK; board Kitchen; ID 1143844005391431228, URL https://www.pinterest.com/pin/1143844005391431228/

Created around 2026-10-22 12:28-12:29 UTC (20:28-20:29 Manila). Exact destination and boards were confirmed. Account total rose from 62 to 65. No reason to re-post these immediately.

Image/source manifests: marketing/pirevo/PIREVO_PIN_ASSET_QA_20261022.json, marketing/pirevo/approved_pins_v3.json; originals in marketing/pirevo/pins/fullbleed/ and released files in public/pirevo/assets/pins/v3/.

Source/release Git commit 7723e7c7962455f159ef5ddb8aab4fe0d9fc58f5. Confirm canonical record before changes.

10. Pinterest Batch 2: 3 FINISHED PREVIEW DRAFTS, NOT PUBLISHED

Recorded by latest local Git commit d0b8da4. Three distinct 1000x1500 photorealistic lifestyle Pin drafts; local file hash, Pexels source/photographer/license, destination, board, phone preview and known failure are all in:

marketing/pirevo/PIREVO_PIN_BATCH2_QA_20261022.json
marketing/pirevo/pins/fullbleed/

Owner exact-asset approval is PENDING. Do not treat owner's earlier "ok sige" for Batch 1 as approval for these.

- Mighty Patch Original 36 Count (B074PVTPBW): file pirevo_batch2_mighty-patch-original-36_20261022.jpg, SHA256 1ccfc5538483be3655caf997fad863ac0d048c0b171dec79a4fd6bb1561d6e39, Pexels photo 7607777, by Tima Miroshnichenko, Beauty board 1143844074049638237. Photo is illustrative, not exact branded hydrocolloid patch depiction. Preview passed, owner approval pending.
- Vtopmart Under-Sink Drawers Four Pack (B0BZNPDHR9): FINAL CORRECTED file pirevo_batch2_vtopmart-under-sink-drawers-4_20261022_v2.jpg, SHA256 5a4924db8f6eb26523a2519c8536f623541d099d318483553853b0b9a2d93c14. Pexels photo 10568271 by Ron Lach, Kitchen/Smart Home board 1143844074049638244. Initial image REJECTED because it misleadingly showed above-sink caddy and claimed an under-sink product; REJECTED source in pins/rejected directory. Use ONLY corrected v2. Preview passed, owner approval pending.
- Earth Rated Lavender Dog Waste Bags 270 (B00BSYR7K8): file pirevo_batch2_earth-rated-poop-bags-270_20261022.jpg, SHA256 80574d755da152d8f8c3d58a633b75886a481424ba0a803cb8d505e8906a264d, Pexels photo 13661420 by Rüveyda, PIREVO Finds board 1143844074049522281. Photo is illustrative dog walk, not exact package. Preview passed, owner approval pending.

IMPORTANT: do not call these 3 "published", do not fabricate provider Pin IDs, and do not add PUBLISHED to the master until owner approves exact files, validator passes and provider GET_PIN verifies publication. Existing Batch 1 is unchanged.

If preparing for approval, show ACTUAL finished JPGs from the file/repo, not substitute search images or reference photos. All 3 original files exist in Mac repository and are already backed up in Git.

11. Direct live Pinterest operating runbook (NO SCHEDULING)

A. Read this document, hard-lock SOP, both manifests and latest Akashic records.

B. Verify Git HEAD/clean state, free disk, and current source counts; verify product PDP URL/status and Amazon exact ASIN.

C. For current Batch 2, display exact 3 JPGs to owner and request image-level approval. Approval must mention these specific assets; never auto-approve via writing the JSON without user approval.

D. Once approved, freeze final SHA, record reviewer/time in marketing/pirevo/approved_pins_v3.json; if final creative differs materially, re-show it.

E. Run PINTEREST V3 machine validator and thumbnail/full-size visual QA. Do not bypass because tooling is offline; record actual blocker.

F. For each finished image, connect account via Composio, upload image media using real bytes (Base64 as supported), set approved title/description/alt, exact PIREVO tracked URL and matching Pinterest board; submit via PINTEREST_CREATE_PIN for immediate publication. NEVER schedule.

G. Read provider return and PINTEREST_GET_PIN per new ID. Confirm board, first-party URL, exact product, image and timestamp. Handle failed API/auth with specific blocker and no false post.

H. Update the 142-row master, image QA record, approved ledger, Akashic and GitHub; preserve existing records. Check actual account/board post counts. Continue next distinct unposted high-priority items in manageable sets; seek next image batch approval under SOP.

I. Legacy remake project: audit old Pins visually, fix poor white-card layouts with new material compositions and accurate links while preserving original live Pin URLs and avoiding spam duplication.

J. Every future handoff should include published count, true Pin URLs, approved/draft/rejected totals, remaining work and next exact queue.

No background autonomous promise; each new chat can resume directly from versioned records without redoing prior publication.

12. Commercial / SEO / growth roadmap

Near-term:

- Do not substitute 1,000 planned product placements for current 142. Research and publish small exact-ASIN batches with demand and buyer-intent evidence. Start with underfilled categories and products with useful original comparison content.
- Improve Google search acquisition: indexable unique editorial categories and guide pages; keyword/title mapping, appropriate article schema, internal linking, crawl and mobile QA, Search Console indexing and impressions. Avoid copying Amazon star/review counts or mass template pages.
- Expand conversion: category-to-product, compare hub, actionable buying guides, accurate affiliate CTAs with disclosure, UTM measurement, Pinterest landing coherence, focus on qualified outbound clicks over vanity views.
- Pinterest growth: first audit 65 live Pins for aesthetics, broken links and true clicks; replace outdated low-quality designs progressively. Batch new FULL-BLEED 2:3 creatives with helpful honest hooks, distinct visual angles, specific product pages and source provenance. Don't make same design with just changed headline. Track board, impressions, saves,

outbound clicks and attributable sales over observation windows.

- Seasonal relevance: Halloween's relevance ends late October; do not keep producing expired seasonal content, pivot to timely holiday practical gifts and evergreen products only if exact content and source are accurate.
- International: current ten markets enabled in Amazon account but per-product local match and commission measurement still open. Check actual global earnings report and sample redirects rather than assuming full coverage. JP/AU optional later owner-led legal enrollment.
- Merchandising: the main storefront is a curated editorial shop with good product discovery; do not falsely claim to sell/fulfil stock directly. Maintain four first-party Apps/KDP cards directly after Categories in same small format and retain gallery/carousels.
- Dashboard: join first-party page view, compare_view and outbound_click events with Pinterest clicks and Amazon reporting where permitted. Establish baseline; monitor changes with attributable evidence. No fabricated events, impressions or sales.
- Images: comprehensive remediation of Amazon CDN reuse remains required. New licensed/generated scenes must not counterfeit real branded products.

Medium-term:

- Progress toward 50 useful SKUs/category where qualified demand merits it. Add original comparisons, internal guide hubs, scalable catalog feed and source QA rather than indiscriminately bloating 20 categories.
- SEO/AEO discoverability: compare target search queries, refine titles/meta, create differentiated guides and answer buyer questions, add genuine provenance/experience declarations, measure impressions/clicks weekly when user authorizes live work (not default scheduled).
- Broaden monetization only where legally/permitted and unit economics are sensible; protect existing Amazon account/tax/payout data, website releases, KDP titles and app destinations.
- Create repeatable (but not scheduled) direct-run generator, review queue, validator, publisher and writeback so the operator can process multiple product creatives without forgetting which step failed.

Open constraints: actual revenue and outbound conversion not proven here; no claim of Google traffic growth from sitemap submission; no verified SKU-by-SKU stock across all ten markets.

13. Quality, release, operational safeguards

- Protected legacy browser profile and account sessions. Managed Astra Chrome normally headless; do not hijack normal Chrome. Ask only for owner login/CAPTCHA when actually needed; never paste tokens or passwords.
- No automated publication if image/license/SKU/SEO/affiliate checks fail.
- Source-controlled QA and rollback: no overwriting already published Pin IDs or signed releases.
- Keep user-owned account data, verified creatives and historical files. Git status should be clean following checkpoints. Disk pressure can recur; delete only proven regenerable local dist/temp QA logs after checking, not docs/browser profiles/owner data.
- Verify legal and commercial claims; source reports or market rankings are dated and often estimates, not accurate live unit-sales proof.
- For future PDF build, render every page and inspect clipped text, awkward page breaks and orphan headings.
- Distinguish 65 provider Pins (Oct22 dated) from 142 published website products, 3 new Pins, 30 old main-board product-Pin instances, 29 old unique product matches, 3 Batch2 drafts, and 20 category roundup concepts.

14. Canonical continuation prompt for next chat

"Continue PIREVO direct product-research and Pinterest production from the full context transfer dated 2026-10-22. Read complete PIREVO context handoff, Creative SOP v3.0 HARD LOCK, latest Akashic records, marketing/pirevo/PIREVO_PRODUCT_PIN_MASTER_20261022.csv, PIREVO_PIN_BATCH2_QA_20261022.json, approved_pins_v3.json, and CATEGORY_50_BACKLOG_20261022.json BEFORE editing. Maintain v5 storefront and compact Apps/KDP under Categories, 142 published products, 20 category 50-product growth target (858 still unfilled). Batch1's three real Pinterest posts (IDs 1143844005391431160, 1143844005391431204, 1143844005391431228) are already published and must not be duplicated. Batch2's Mighty Patch, Vtopmart corrected v2 and Earth Rated images are visually previewed but owner-image approval and publishing are PENDING. Show exact exported JPGs for approval; run validator before publishing. Use direct connected Composio Pinterest + hidden Astra Browser, no scheduled automation. Verify real Pinterest IDs/URLs; update master, Akashic and GitHub after every release. Continue high-demand product research and compliant creative batches under the strict premium full-bleed 2:3 visual SOP. Preserve owner files, original accounts, truthful source status and zero-cost first."

Document provenance: sourced from the local canonical repo, hard-locked Creative SOP v3, Oct22 PIREVO storefront/SEO audit, 142-product master tracker, category plan, Batch1 actual Pinterest provider URL records, Batch2 exact QA/hashes and current Akashic project records. Counts are dated snapshots, not guarantees of future publication, stock or income.
